Staff are able to view all family members of each CARE recipient's network.
- Staff Webview**
Staff are able to view all active staff members on the app.
- CARE recipient database**
Staff can view and change between all accounts of those they care for. Changing between networks as required.

CARE Konnect

Our Story

As our parents aged and our lives became busier it was often hard to stay connected.

With most of the family living interstate and overseas it was difficult to co-ordinate communication, plan events, and keep the whole family connected around our parents. When our parents became ill it was particularly difficult to keep everyone in the loop - this was upsetting and frustrating for family members.

This gave rise to a private network mobile app called Care Konnect.

Initially built for chat and photos we extended the functions so that users can have real time live feeds through video, news feeds, co-ordinating plans through a calendar function... and so it grew from there.

Whether the older person lives at home, retirement living or residential care - keeping family and friends connected is essential to the health and well-being of the older person and sustaining the family ties.

Care Konnect is an inexpensive private network for aged care and disability services.
